

■ Appletree Interiors

Manual & SOP

Stories Furniture & Interiors

Standard Operating Procedures for CRM · Projects · Inventory · Material Flow · Finance · Reports

Document Version	v2.0 — June 2026
Prepared For	Appletree Interiors — Operations Team
Modules Covered	24 Modules · CRM to Finance · Inventory Flow
Classification	Internal — Confidential

PURPOSE

This manual covers every module in the Appletree Operations ERP — from logging a lead to issuing materials, tracking product-wise costs, running QC checks, and generating financial reports. Read the relevant section before operating each module.

Table of Contents

1	Getting Started — ERP Overview & Navigation	3
2	CRM & Sales — Leads, Quotations, Customers	4
3	Projects & Products (Furniture Items)	5
4	Labour & Wages	7
5	Project Expenses	8
6	QC Checklist	9
7	Warehouse & Inventory Management	10
8	Purchases — Warehouse vs Project Direct	11
9	Material Issues (Warehouse → Project → Product)	12
10	Material Returns (Product → Warehouse)	14
11	Sales Invoices & Receipts	15
12	Vendor Bills & Payables	16
13	Banking & Petty Cash	17
14	Reports — Job Analysis, P&L;, Product Costing, Stock	18
15	Master Data — Workers, Items, Vendors	20
16	Quick Reference — Daily Workflow Checklist	21

1

Getting Started — ERP Overview & Navigation

Understanding the interface before you begin

1.1 What is the Appletree ERP?

The Appletree Operations ERP is a single-file web application that runs entirely in your browser. It covers the complete operations cycle of an interior fit-out company — from capturing a lead to issuing materials, tracking wages, running QC checks, and generating financial reports. All 24 modules are accessible from the left sidebar.

1.2 How to Open the ERP

1

Open the File

Locate appletree_erp_v2.html on your computer. Double-click to open in Chrome or Edge.

2

No Internet Needed

The ERP is fully offline. No login, no cloud dependency — all data is in-memory.

3

Bookmark It

Pin the file to your taskbar or desktop for quick daily access.

4

Data Resets on Refresh

IMPORTANT: Data is stored in memory. Do not refresh the page mid-session. Export to CSV before closing.

1.3 Sidebar Navigation

Group	Modules	Use When
CRM & Sales	Leads, Quotations, Customers	Client pipeline management
Projects	Projects, Products/Items	Setting up a new project and its furniture items
Operations	Labour, Expenses, QC	Daily site cost entries and quality checks
Inventory	Warehouse, Purchases, Issues, Returns	Stock management and material flow
Finance	Invoices, Receipts, Bills, Banking	Billing, collection and payment tracking
Reports	Job Analysis, P&L, Product Costing, Stock	End-of-day / end-of-project analysis
Master Data	Workers, Items, Vendors	One-time setup of people and materials

1.4 Active Project Selector

The dropdown at the top of the sidebar shows the **Active Project**. Select a project here to pre-filter all sub-menus. You can always view "All Projects" by leaving the filter blank in each module.

TIP

Always select the active project in the sidebar dropdown before starting entries for the day. This pre-fills project fields across Labour, Expenses, Issues and QC modules.

2

CRM & Sales

Leads · Quotations · Customers

2.1 Leads & Enquiries

Every new client enquiry should be logged as a Lead immediately.

1

Go to Leads & Enquiries

Click in the sidebar under CRM & Sales.

2

Click "+ New Lead"

The form opens.

3

Fill the details

Name, Phone, Location, Source (Referral / Instagram / Website), Estimated Value, Status = New.

4

Save

Lead appears in the table. Update Status as the client progresses.

Lead Status Pipeline:

Status	Meaning	Next Action
New	Enquiry received, not yet contacted	Call/WhatsApp within 24 hours
Contacted	Initial conversation done	Schedule site visit
Site Visit	Team visited the property	Prepare quotation
Quoted	BOQ/quotation sent to client	Follow up in 3 days
Won	Client approved, PO/advance received	Create Project → Convert to Customer
Lost	Client did not proceed	Log reason for analysis

2.2 Quotations / BOQ

Once a site visit is done and scope finalised, create a Quotation. A separate BOQ PDF can be generated using the BOQ tool — this module tracks quotation status and approval.

- Click **+ New Quotation** → fill Ref No. (e.g. STR/Q/003), Customer, Amount.
- Set Status = **Draft** while preparing, change to **Sent** when shared with client.
- On client approval: change to **Approved** → then create a Project for this client.
- Rejected quotations should be marked **Rejected** — do not delete, retain for records.

2.3 Customers

Add a Customer record when a Lead converts (status = Won). The Customers module shows all clients, their projects, and total billing.

NOTE

A Customer is different from a Lead. Leads are prospects. Customers are confirmed clients with a project. Always create the Customer record before creating an Invoice.

3

Projects & Products

Project Setup · Furniture Item Tracking

3.1 Creating a New Project

A Project is the top-level record for each client engagement. All costs — materials, labour, expenses — are tracked under a project. Every project gets a unique code (e.g. EST0083).

1

Go to Projects

Sidebar → Projects → click "+ New Project".

2

Enter Project Code

Format: EST followed by serial number (e.g. EST0083). Use your existing numbering.

3

Fill Client Details

Client/Site Name, Location, Contract Value ■, Start Date.

4

Set Status

Planning → Active → On Hold → Completed.

5

Save

Project now appears in the sidebar dropdown and all module filters.

IMPORTANT

Contract Value is the total agreed amount. This is the revenue against which costs are measured in Job Analysis reports. Update it if scope changes.

3.2 Adding Products (Furniture Items) to a Project

Products are individual furniture or fit-out items within a project — e.g. Master Bedroom Wardrobe, Kitchen Cabinets, TV Unit. This is the most important concept in the ERP: each product independently tracks its own material cost, labour wages and expenses.

1

Go to Products / Items

Sidebar → Projects → Products / Items.

2

Filter by Project

Use the project dropdown to select the current project.

3

Click "+ Add Product"

The product form opens.

4

Fill Details

Select Project, enter Product Name (e.g. "Master Bedroom Wardrobe"), Category, Estimated Cost ■.

5

Repeat for all items

Add every furniture item that will be tracked separately.

3.3 Product Categories Available

Category	Examples
----------	----------

Wardrobe	Sliding wardrobe, hinged wardrobe, loft wardrobe
Kitchen	L-shaped kitchen, parallel kitchen, island kitchen
TV Unit	Floor-mounted, wall-hung, with back panel
Study	Study desk, overhead cabinet, bookshelf unit
Cot / Bed	Box cot, platform bed, hydraulic storage bed
Shoe Rack	Entryway shoe rack, closed cabinet
Loft	Bedroom loft, balcony loft, utility loft
Pooja Unit	Wall-mounted, floor-standing
Dining	Dining table, crockery unit, buffet counter
Bathroom Vanity	Under-sink cabinet, mirror unit
Other	Any custom item not in the above list

3.4 Reading the Product Card

Each product shows as a card on the Products page. The card displays:

- **Progress bar** — green means within estimate; turns red if overspent.
- **Spent** = Net Materials + Labour + Expenses assigned to this product.
- **Est** = Estimated cost you entered at setup.
- **% used** — percentage of estimate consumed.
- **Mat / Lab / Exp tags** — quick breakdown across three cost categories.
- **Click the card** to open a detailed modal with every issue, return, labour entry and expense line.

4

Labour & Wages

Daily wage entries per worker, per product

Labour entries record daily wages paid to carpenters, polish workers, and other tradesmen. Critically, each entry is linked to a **Project** and optionally a **Product** — this is what enables product-wise cost tracking.

4.1 How to Add a Labour Entry

1

Go to Labour & Wages

Sidebar → Operations → Labour & Wages.

2

Click "+ Add Wage Entry"

The wage form opens.

3

Set the Date

Use actual work date (not payment date).

4

Select Project

The project this work relates to.

5

Select Product

IMPORTANT — select the specific furniture item this worker worked on. Use "General" only for site-level tasks with no specific product.

6

Select Trade

Carpenter / Polish / Fabrication / Gypsum / Paint / Glass / Curtain / Electrical / Plumbing.

7

Enter Worker Name

Type name or select from the autocomplete list.

8

Enter Voucher No.

From the payable slip / petty cash voucher. Match with Tally.

9

Select Voucher Type

Payable = end-of-day sheet; Petty Cash = immediate cash; Journal = adjustment.

10

Enter Amount ■

Exact wage amount for that day/session.

11

Save

Entry recorded. Immediately visible in Labour table and in the product card cost breakdown.

4.2 Filtering Labour Entries

- Filter by **Project** — see all workers on a specific project.
- Filter by **Trade** — see only carpenters, or only polish workers.
- Filter by **Product** — see all labour cost for one furniture item.
- Use the **Search box** to find a specific worker by name.
- The **Total** figure on the right updates with every filter — useful for quick summaries.

4.3 Best Practices for Labour Entry

- *Enter daily* — do not accumulate wage entries for the week. Daily entries ensure accurate product cost tracking.
- If a carpenter worked on **two products in one day**, split the wage across two entries (e.g. ₹900 split as ₹500 Wardrobe + ₹400 Kitchen).
- Always match Voucher No. with the physical payable slip number for audit trail.
- For contract workers paid by the job (not daily), use a single entry with Voucher Type = Payable.

IMPORTANT

Assigning labour to a Product (Wardrobe, Kitchen, etc.) is critical. Without this, the Product Costing report will not show accurate labour cost per item. Make it a daily habit.

5

Project Expenses

Transportation · Misc · Sub-contract costs

Project Expenses cover all costs that are not materials or wages — transportation, scaffolding, CNC work, paint, sub-contract work, etc.

5.1 Adding an Expense

1

Go to Project Expenses

Sidebar → Operations → Project Expenses.

2

Click "+ Add Expense"

3

Fill Date and Voucher No.

Match with Petty Cash book or Payable slip.

4

Select Project and Product

Assign to a product if the expense is product-specific (e.g. transportation of completed wardrobe). Use General for site-level costs.

5

Select Category

Transportation / Scaffolding / CNC Work / Paint Work / Travelling / Miscellaneous.

6

Enter Particulars

Brief description — e.g. "Delivery of kitchen to Nadapuram site".

7

Enter Amount and Save

Category	Examples	Assign to Product?
Transportation	Material delivery, item delivery to site, vehicle hire	Yes — if for a specific item
Scaffolding	Scaffolding rent for ceilings or heights work	No — site-level
CNC Work	CNC routing for decorative panels	Yes — assign to that product
Paint Work	Paint materials + painter wages (if combined bill)	Yes if product-specific
Work Exp	Cutting charges, miscellaneous tools, consumables	Optional
Travelling	Site visit fuel, auto charges for team	No — site-level

6

QC Checklist

Quality control at each stage of production

Quality checks are recorded per product at each stage of manufacturing. A failed QC triggers a rework and the item must be re-checked before moving to the next stage.

6.1 QC Stages

Stage	What is Checked	Inspector
Carcass Check	Box joints, squareness, ply quality, back panel fit	Supervisor / Yaseen
Polish Check	Finish quality, colour consistency, grain direction	Polish Supervisor / Bazil
Hardware Fit	Hinge alignment, slider operation, lock function	Carpenter Lead
Shutter Alignment	Gap uniformity, level, overlay consistency	Supervisor
Final Inspection	All above combined + overall aesthetics	Yaseen / Bazil
Pre-delivery Check	Packaging, no scratches, all accessories present	Supervisor
Site Handover	Client present, all items installed, demo given	Yaseen

6.2 Recording a QC Entry

1

Go to QC Checklist

Sidebar → Operations → QC Checklist.

2

Click "+ New QC Entry"

3

Select Project and Product

The specific furniture item being checked.

4

Select Stage

Choose the appropriate stage from the list.

5

Set Result

Pass / Fail / Rework.

6

Enter Remarks

If Fail — describe what failed and required action.

7

Save

Entry is logged with date and inspector name.

RULE

A product must have a Pass result at Final Inspection before it can be packed for delivery. Do not skip QC stages — they create an audit trail and protect against client complaints.

7

Warehouse & Inventory Management

Central stock tracking

The Warehouse is the central stock location at Appletree. All raw materials arrive here (unless directly to a project site). Issues go out from here to projects and products.

7.1 Warehouse Stock Page Overview

- **Total SKUs** — number of unique items in warehouse.
- **Stock Value** — total value of all items at their purchase rate.
- **Low Stock Items** — items at or below the reorder level (shown in amber).
- **Red Qty** means zero stock — cannot issue this item.
- **Reorder Level** — minimum threshold before restocking.

7.2 Adding a New Item to Warehouse

1

Go to Warehouse Stock

Sidebar → Inventory → Warehouse Stock.

2

Click "+ Add Item"

3

Enter Item Code

Short code like BWP18, LAM01, HW005.

4

Select Category

Ply/Board, Hardware, Laminate, PVC/WPC, Paint, etc.

5

Enter Item Name, Unit, Opening Qty, Rate, Reorder Level

6

Save

Item is now available for Issues.

7.3 Stock Adjustment

Use Stock Adjustment for physical count discrepancies, damage write-offs, or corrections. Click the **± Adjust Stock** button.

- **Add Stock** — increases qty (e.g. found extra sheets during count).
- **Remove Stock** — decreases qty (e.g. damaged material write-off).
- **Set Exact Qty** — overrides to a specific count after physical verification.

TIP

Run a physical stock count at the end of each month. Use "Set Exact Qty" to reconcile any differences. Note the reason (e.g. "End of month physical count — June 2026").

8

Purchases

Warehouse stock-in vs Project-direct purchases

Purchases are of two types in the Appletree ERP — this distinction is critical for correct inventory accounting.

8.1 Warehouse Purchase (Adds to Stock)

When materials are bought and brought to the factory/warehouse, use destination **Warehouse**. These materials will be issued to projects later.

1

Go to Purchases

Sidebar → Inventory → Purchases.

2

Click "+ New Purchase"

3

Enter Date, Vendor, Items description, Voucher No.

4

Set Destination = Warehouse

This will add to warehouse stock.

5

Enter Amount and Save

Record created. Now go to Warehouse → manually update qty if needed, or use Material Issue to move stock to project.

8.2 Project-Direct Purchase (Bypasses Warehouse)

When materials are bought and taken directly to the site (never enter warehouse), use destination **Project Direct**. These are assigned directly to a project and optionally a product.

1

Set Destination = Project Direct

2

Select Project and Product

Critical — assign to the right product for accurate costing.

3

Save

Cost is recorded against the project and product. No warehouse stock movement.

	Warehouse Purchase	Project Direct Purchase
Enters Warehouse?	Yes — stock increases	No — bypasses warehouse
Affects Stock Report?	Yes	No
Assigned to Product?	Not directly (via Issue later)	Yes — directly
Example	BWP Ply 18mm — 20 sheets to factory	Hinges bought at site for wardrobe
Petty Cash?	Usually Purchase/Payable	Often Petty Cash

9

Material Issues

Warehouse → Project → Product

Material Issues are the most important daily inventory transaction. When materials move from the warehouse to a project for use in a specific product, an Issue is created. This deducts stock from the warehouse and adds cost to the product.

9.1 How to Issue Material

1

Go to Material Issues

Sidebar → Inventory → Material Issues.

2

Click "+ Issue Material"

The issue form opens.

3

Select Item from Warehouse

Dropdown shows all warehouse items with current qty. Rate auto-fills.

4

Enter Qty

The amount being taken from warehouse. System checks available stock — cannot over-issue.

5

Verify Unit and Rate

Auto-filled from warehouse. Adjust rate only if this batch differs from stock rate.

6

Amount auto-calculates

Qty × Rate. Read-only field.

7

Select Project

Which project is this material going to.

8

Select Product

CRITICAL — select the specific furniture item. e.g. "Master Bedroom Wardrobe". Use General only for site consumables.

9

Enter Notes (optional)

e.g. "For carcass — 8 sheets BWP 18mm".

10

Save

Issue No. (MI/008) is auto-generated. Warehouse qty is immediately reduced. Product cost increases.

9.2 Quick Issue from Warehouse Page

From the Warehouse Stock page, click the **Issue** button next to any item. This opens the issue form pre-filled with that item — faster for warehouse staff.

9.3 Checking Issue Status

- The **"Ret'd"** column shows how many units have been returned against each issue.
- **Total Issued** — cumulative value of all issues.
- **Returned** — value credited back from returns.
- **Net Consumed** — actual material cost (Issued minus Returns).
- Click the **■ Ret button** next to an issue row to quickly open a return for that specific issue.

CRITICAL RULE

Always assign an Issue to a Product. Never issue large quantities without a product. If material is for multiple products, split into separate issues. Example: 20 sheets BWP should be issued as 8 sheets to Wardrobe + 12 sheets to Kitchen — not 20 sheets to General.

10

Material Returns

Product → Warehouse (stock credit back)

When issued materials are not used and need to go back to the warehouse, a Material Return is created. This adds stock back to the warehouse and reduces the product's material cost.

10.1 When to Return Material

- **Excess material** — more was issued than needed. Unused sheets / hardware go back.
- **Wrong item** — wrong laminate colour or size was issued.
- **Damaged item** — material received but found damaged (credit back, do not use).
- **Design change** — client changed design, original material not needed.

10.2 How to Return Material

1

Go to Material Returns

Sidebar → Inventory → Returns.

2

Click "Return Material"

Or click "Ret" on the Issues page for a specific issue.

3

Select Reference Issue

Choose the original issue this return relates to (MI/001, MI/002, etc.). Item, Project and Product auto-fill.

4

Enter Return Qty

How many units are being returned. Cannot exceed original issue qty.

5

Verify Rate

Auto-filled from original issue. Return value = Return Qty × Rate.

6

Enter Reason

Excess material / Wrong item / Damaged / Design change.

7

Save

Return No. (MR/002) auto-generated. Warehouse stock increases. Product cost decreases.

10.3 Effect of a Return

Impact	Before Return	After Return
Warehouse Stock	42 sheets BWP 18mm	43 sheets BWP 18mm (+1 returned)
Issue Record	Shows full qty	Shows returned qty in "Ret'd" column
Product Mat. Cost	■22,400 (8 sheets × ■2,800)	■19,600 (7 sheets net × ■2,800)
Net Consumed Report	Full issued amount	Reduced by return value

NOTE

Returns do not delete the original issue — they create a separate credit record. This maintains a complete audit trail of what was issued and what came back.

11

Sales Invoices & Receipts

Billing and collection tracking

11.1 Creating a Sales Invoice

1

Go to Sales Invoices

Sidebar → Finance → Sales Invoices.

2

Click "+ New Invoice"

3

Enter Invoice No.

Format: STR/INV/004. Use sequential numbering.

4

Select Customer and Project

5

Enter Amount ■ and Paid ■

If full advance received, set Paid = full amount. If partial, enter what is received.

6

Set Status

Draft → Sent → Partial → Paid → Overdue.

7

Save

Invoice Status	Meaning
Draft	Prepared but not yet sent to client
Sent	Shared with client, awaiting payment
Partial	Some payment received, balance pending
Paid	Full amount collected
Overdue	Due date passed, payment not received — follow up immediately

11.2 Recording a Receipt (Payment from Client)

1

Go to Receipts & Payments

Sidebar → Finance → Receipts & Payments.

2

Click "+ Add Receipt"

3

Enter Date, Source (client name), Project, Mode (Bank/Cash/UPI/Cheque)

4

Enter Amount ■ and Remarks

e.g. "Advance — 30% as per agreement".

5

Save

Receipt recorded. Also update the related Invoice's Paid amount and Status.

NOTE

Always record receipts the same day the payment is received. This keeps the Project balance (Invoice Amount – Paid Amount) accurate for collection follow-up.

12

Vendor Bills & Payables

Tracking what we owe vendors

Vendor Bills track money owed to suppliers, sub-contractors, and service providers. Record a bill when goods/services are received but not yet paid for.

12.1 Recording a Vendor Bill

1

Go to Vendor Bills

Sidebar → Finance → Vendor Bills.

2

Click "+ Record Bill"

3

Enter Bill No., Date, Vendor Name

4

Enter Description

What was supplied/done — e.g. "Curtain works — Test Project".

5

Enter Amount ■ and Status

Unpaid / Partial / Paid.

6

Save

Bill appears with Balance (Amount – Paid) highlighted in red if unpaid.

TIP

Check Vendor Bills every Friday. Any bill showing status "Unpaid" for more than 15 days should be escalated for payment. Keeping vendors paid on time ensures material credit terms.

13

Banking & Petty Cash

Cash and bank transaction ledger

The Banking module tracks all movement through the SBI current account and petty cash. It shows running balances and helps reconcile against the physical bank statement.

13.1 Adding a Banking Entry

1

Go to Banking & Petty Cash

Sidebar → Finance → Banking & Petty Cash.

2

Click "+ Add Entry"

3

Select Account

SBI Current / Petty Cash.

4

Enter Particulars

Brief description — e.g. "Client receipt — Test Project instalment 2".

5

Enter Debit (money in) or Credit (money out)

6

Save

Running balance updates automatically.

RECONCILIATION

At month-end, compare the ERP bank balance with the actual SBI statement. Any difference should be traced and corrected before closing the period.

14

Reports

Job Analysis · P&L · Product Costing · Stock Ledger

14.1 Job Work Analysis

The Job Analysis report is the primary profitability report for each project. Select a project from the dropdown to see its full P&L.;

- **Revenue** — total invoiced value for the project.
- **Materials Consumed** — net issues minus returns plus direct purchases.
- **Labour by Trade** — carpenter, polish, fabrication wages broken down.
- **Expenses by Category** — transportation, scaffolding, misc.
- **Net Profit / Loss** and margin % vs contract value.
- **Progress bars** show each cost category as a proportion of total.

14.2 Product Costing Report

This is the most powerful report in the ERP for operations management. Select a project to see *every furniture item* with:

- **Material Issues** ■ — value of all material issued to this product.
- **Returns** ■ — materials credited back.
- **Net Material** ■ — net material cost (issues – returns).
- **Labour** ■ — all wages assigned to this product.
- **Expenses** ■ — expenses linked to this product.
- **Total Cost** ■ — sum of all three.
- **Estimated** ■ — your original estimate.
- **Variance** — Under budget (green) or Over budget (red) with amount.

USE THIS WEEKLY

Review the Product Costing report every Friday for active projects. Any product showing "Over budget" in red needs immediate attention — either the estimate was wrong or costs must be controlled.

14.3 P&L; Report

Shows the overall Profit & Loss across all projects: Gross Income → Cost of Production → Gross Profit → Operating Expenses → Net Profit.

14.4 Stock Ledger Report

Select any item from the dropdown to see its complete stock movement history — every purchase (in), every issue (out), and every return (back in). Useful for reconciling physical count vs. system count.

15

Master Data Setup

Workers · Items · Vendors — one-time setup

Master data should be set up once before operations begin. These records are referenced across all modules.

15.1 Workers Master

- Add every worker: Name, Trade, Phone, Daily Rate.
- Worker names in the Labour module autocomplete from this list.
- Total entries and total paid auto-calculate from labour records.
- Update daily rate if worker's rate changes.

15.2 Item Master

- Add all standard materials: Code, Name, Category, Unit, HSN code, GST%, Standard Rate.
- Item Master and Warehouse Stock are separate: Item Master is the catalogue; Warehouse is the stock.
- Use HSN codes for GST compliance when creating purchase orders and invoices.

15.3 Vendor Master

- Add all suppliers: Name, Category, Phone, GSTIN, Location.
- Vendor names autocomplete in Purchase and Bill forms from this list.
- Total Purchased figure auto-calculates from purchase records.
- GSTIN is required for input tax credit (ITC) — ensure it is entered correctly.

16

Quick Reference — Daily Workflow Checklist

What to do each day

Morning Routine (Site Supervisor / ERP Operator)

1

Check Stock Alerts

Warehouse page — order any item below reorder level

2

Review Active Projects

Dashboard — check project status and recent moves

3

Select Active Project

Set project in sidebar dropdown before making any entries

During the Day

1

Issue Materials

Each time material leaves warehouse → Material Issues → assign to project + product

2

Log Labour

At end of each worker's shift → Labour & Wages → enter against project + product

3

Record Purchases

On any cash/credit purchase → Purchases → set correct destination

4

Log Expenses

Any transportation / misc cost → Project Expenses → with voucher no.

5

QC Checks

After each production stage → QC Checklist → Pass or Fail with remarks

End of Day

1

Review Product Cards

Products page — check no product is going over estimate without flag

2

Export Data

Use ■ Export button to save today's table as CSV — before closing browser

3

Update Bill Status

Mark any vendor bills paid today as Paid in Vendor Bills

Weekly Checklist

Task	Module	Frequency
Review Product Costing — check over-budget items	Reports → Product Costing	Every Friday
Run Job Analysis for active projects	Reports → Job Analysis	Weekly

Check unpaid vendor bills	Finance → Vendor Bills	Every Friday
Follow up on overdue invoices	Finance → Sales Invoices	Weekly
Physical stock count (spot check)	Warehouse Stock	Weekly
Reconcile petty cash with physical cash	Banking & Petty Cash	Weekly
Update lead statuses in CRM	CRM → Leads	Weekly

Key Rules — Never Forget

GOLDEN RULES

Always assign Issue to a Product — never leave product field as General for main materials. | Labour entries daily — do not accumulate; assign to correct product each day. | Export before closing — ERP data is in-memory and resets on browser refresh. | Match Voucher Nos. — all ERP entries should cross-reference Tally voucher numbers for audit.

GOLDEN RULES (continued)

QC before delivery — no product leaves without a Final Inspection Pass entry. | Update lead status — pipeline is only useful if kept current. | Reconcile monthly — stock count, bank statement, petty cash — all three.
