

APPLETREE INTERIORS

Interior Design | Manufacturing | Turnkey Fit-Out

STANDARD OPERATING PROCEDURE

ERP System - All Modules

Version 2.0 | July 2026

CONFIDENTIAL - INTERNAL USE ONLY

1. Introduction

This Standard Operating Procedure (SOP) covers the Appletree Interiors ERP system - a single, unified platform that manages the full business lifecycle from first client contact through design, manufacturing, site installation, invoicing, and financial reporting.

The ERP is accessed through a web browser and is role-gated: each user sees only the modules relevant to their function. All data is stored centrally and shared in real time across roles.

1.1 Purpose

- Provide a single source of truth for all operations - CRM, production, site, and finance.
- Eliminate manual handoffs by automating status changes across the workflow chain.
- Give the CEO live visibility into every project, machine, delivery, and financial position.

1.2 Scope

This SOP applies to all staff who use the ERP: Sales team, Estimator, Factory Supervisor, Site Supervisor, Procurement, and Accounts. It covers every module in the current version, including MES, Site and Installation, and the Estimation & Costing Engine, Quotations Kanban, and Partners & Referrals additions described in Sections 5 and 15.

2. User Roles and Access

The ERP enforces role-based access. Each role has a dedicated login, a default landing page, and access only to their relevant modules.

CEO	CEO Dashboard	All modules - full read/write	sales.appletreeinteriors@gmail.com / Appletree@2026
Factory Supervisor	Factory Dashboard	Manufacturing, Machines, Warehouse, Material Issues	factory@appletree.com
Site Supervisor	Site Dashboard	Site Deliveries, Installation, Site QC	site@appletree.com
Accounts	Sales Invoices	Invoices, Receipts, Purchases, Finance, Reports	accounts@appletree.com

Note: Only the CEO can access Master Data, Chart of Accounts, Banking, and system-wide Reports. Contact the CEO to update credentials or add new users.

2.1 Role Access Matrix (Editable)

The CEO and Admin roles can view and edit exactly which modules every other role can see, without any code change, from Master Data, then Users and Roles.

1. Navigate to Master Data, then Users and Roles.
2. The Role Access Matrix table shows every module down the left and every role across the top. CEO and Admin always show a fixed checkmark - they always see everything.
3. For every other role, tick or untick the checkbox for each module to grant or remove access.
4. Click Save Access Changes. The affected users' sidebars update the next time they log in or refresh.
5. Click Reset to Defaults at any time to restore the original recommended access for every role.

3. Login and Navigation

3.1 Logging In

6. Open the ERP file (appletree_erp_v2_1.html) in Google Chrome or Microsoft Edge.
7. The login screen appears. Nothing in the system is visible until you sign in.
8. Enter your email address and password.
9. Click Sign In.
10. You are redirected to your role's default landing page.

If you see a blank screen or error, press Ctrl+Shift+R to force-refresh the browser.

3.2 Navigation

The left sidebar shows only the modules available to your role. Click any module name to open it. The active module is highlighted in gold. Use the back arrow within modules to return to a list view.

3.3 Logging Out

Click your name or the logout icon at the top-right of the screen. All unsaved form data will be lost - always save or submit before logging out.

4. CEO Dashboard

The CEO Dashboard is the command centre. It loads automatically after the CEO logs in and refreshes every time you return to it.

4.1 KPI Strip

- Total Revenue (invoiced), Total Cost, Gross Profit, Outstanding Receivables, Active Projects count.
- Live Alert Strip highlights items needing immediate action (overdue payments, machine breakdowns, stock shortages).

4.2 Project Health Cards

Each active project shows three progress bars: Financial (budget vs. actual), Production (operations completed), and Installation (products delivered and installed). A Next Milestone label shows what is due next.

4.3 Milestone Billing Pipeline

Shows which projects have reached a billing milestone and are ready for an invoice to be raised.

4.4 Actions Needed

A prioritised list of items requiring CEO decision or approval - for example, quotations awaiting sign-off, overdue tasks, or projects flagged as at-risk.

5. CRM Module

The CRM manages the full sales funnel from first enquiry through to a won customer and active project.

5.1 Leads

11. Navigate to CRM, then Leads.
12. Click Add Lead.
13. Fill in: Client Name, Phone, Email, Lead Source (referral / social / walk-in / other), Notes, and Status.
14. Save. The lead appears in the Leads list.

Lead Statuses - move the lead through these as you progress:

- New - just received.
- Contacted - initial call or message sent.
- Qualified - site visit or budget confirmed.
- Proposal Sent - quotation sent to client.
- Won - project confirmed.
- Lost - client did not proceed.

5.2 Quotations

15. Navigate to CRM, then Quotations.
16. Click New Quotation.
17. Select the client (from Leads or Customers), set date, validity period, and assigned designer.
18. Add line items manually, or click Open BOQ to use the full BOQ Builder (see Section 5.3).
19. Set status to Draft while preparing, then Sent when emailed to client.
20. Update to Approved, Won, Lost, or Rejected once the client responds. Moving to Won or Lost automatically stamps today's date; moving to Lost prompts for a loss reason (e.g. price too high, went with competitor) which is saved for later analysis on the Costing Dashboard.

5.3 BOQ Builder

The BOQ Builder creates a detailed section-by-section Bill of Quantities with automatic totalling and a printable A4 output. Sections were previously called Rooms - the same room-based layout still works, just relabelled to also suit non-residential scopes of work.

21. On the Quotations list, click Open BOQ next to any quotation.
22. The header shows client name, reference number, revision number, date, designer, validity, discount %, GST %, and status toggle.
23. Click Add Section to create a section (e.g. Living Room, Master Bedroom, Kitchen).
24. Within each section, add a line item two ways: click + Manual Item for free-entry Description, Unit, Qty, Rate (amount calculates instantly); or click + Costed Item to price a

piece of furniture using the Costing Engine - pick a Template and Core Material, enter dimensions and door/drawer/shelf counts, and the selling price is computed automatically from material, hardware, and labour cost plus overhead and profit margin (see Section 15 for how the engine works). Costed items are locked once added - to change one, delete it and add it again with new inputs.

25. Delete any section or row using the trash icon.
26. The Grand Total updates live across all sections, after applying the Discount % and GST % entered in the header. The subtotal line under the grand total shows the breakdown.
27. Log a Follow-up at any time: enter a note and an optional next follow-up date, then click + Add. The follow-up history is listed below, most recent first - use it to track every call or message with the client on this quotation.
28. Increase the Revision number and re-save whenever you issue a materially revised version of the same quotation to the client.
29. Fill in the Terms section: Payment Schedule, Warranty, Scope Inclusions, Scope Exclusions, Notes.
30. Click Print / PDF to open a clean A4 print preview - letterhead, section tables, grand total, and terms - ready to share with the client.

5.4 Customers

A customer record is auto-created when a lead is marked Won, or can be added manually via CRM, then Customers. The customer record links all quotations, projects, invoices, and receipts in one view.

5.5 Quotations Kanban Board

A board view of every quotation, grouped into columns by status - Draft, Sent, Approved, Won, Lost, Rejected.

31. Navigate to CRM, then Quotations Kanban.
32. Each column header shows the count and total value of quotations in that status.
33. Click a card to open that quotation's BOQ Builder directly.
34. Use the small status dropdown on a card to move it to a different column without opening the full BOQ Builder - the same Won/Lost date-stamping and loss-reason prompt applies here too.

5.6 Partners & Referrals

Tracks Architects, Builders, and B2B Partners who refer business to Appletree, so referred leads and their eventual won value can be attributed back to the right partner.

35. Navigate to CRM, then Partners and Referrals.
36. Add an Architect, Builder, or B2B Partner with Name, Phone, Email, Location, and Notes.
37. When adding a Lead, set Source to Architect Referral, Builder Referral, or B2B Partner Referral - a Referred By dropdown then appears, scoped to that partner type.
38. The Costing Dashboard's Business by Referral Partner table then shows, per partner, how many leads they have referred and the total Won value from those leads.

6. Projects Module

6.1 Creating a Project

39. Navigate to Projects, then click New Project (or promote a won quotation to a project from CRM).
40. Fill in: Project Name, Client, Project Type (residential / commercial / fit-out), Start Date, Target Completion Date, Contract Value.
41. Save. The project is assigned a unique Project ID (e.g. AT-2026-042).

6.2 Adding Products (Furniture Items)

42. Open a project and click Add Product.
43. Enter: Item Name, Category (e.g. Wardrobe, TV Unit, Kitchen Cabinet), Estimated Material Cost, Estimated Labour Cost, Target Completion Date.
44. Save. A Manufacturing Job is auto-created for this product immediately.

Every product added to a project flows automatically into the Manufacturing module for production tracking.

6.3 Labour and Wages (per Project)

45. Navigate to Projects, then Labour and Wages, or via Accounts, then Labour and Wages.
46. Select the project and product.
47. Assign a worker (from Worker Master), enter hours worked, and the daily/hourly rate auto-fills.
48. Save. Total wages are deducted from the project profit in Job Analysis.

6.4 Project Expenses

49. Navigate to Projects, then Expenses.
50. Click Add Expense. Select project, enter description, amount, date, and category (transport / outsourcing / miscellaneous).
51. Expenses feed directly into the Job Analysis report.

6.5 QC Checklist (Project Level)

A QC checklist can be attached to any product at the project level. The Factory Supervisor or Site Supervisor ticks off each item. A product cannot move to the next stage until all critical QC items are checked.

7. Manufacturing Module (MES)

The Manufacturing Execution System (MES) tracks every product from raw material to dispatch. The Factory Supervisor manages this module from the Factory Dashboard.

7.1 Factory Dashboard

The Factory Dashboard is the default view for the Factory Supervisor. It shows:

- Kanban board with four columns: Waiting | In Progress | QC Pending | Done
- Machine Status panel: each of the 6 machines shown as Running / Idle / Breakdown
- Material Shortages: items below minimum stock level highlighted in red

The Factory Supervisor uses this board to manage daily production flow and prioritise work.

7.2 Manufacturing Jobs

52. Navigate to Manufacturing, then Jobs.
53. Jobs are auto-created when a product is added to a project - no manual creation needed.
54. Each job card shows: Product Name, Project, Status, Priority (Low / Medium / High / Urgent), Due Date, Assigned Operator.
55. Click any job to open its Operations list.
56. Change priority or due date directly on the job card as needed.

7.3 Job Operations

Each job moves through a fixed sequence of operations. The Factory Supervisor assigns an operator and machine to each step, then marks it done.

Standard Operation Sequence:

57. Cutting
58. Edge Banding
59. CNC Routing
60. Drilling
61. Grooving
62. Assembly
63. Sanding
64. Painting / Priming
65. Polishing
66. Hardware Fitting
67. Cleaning
68. Packing
69. Final QC

How to progress an operation:

- 70. Open the job.
- 71. Click the current operation to expand it.
- 72. Assign Operator (from Worker list) and Machine.
- 73. Enter per-operation cost if applicable.
- 74. Click Mark Done. The next operation starts automatically.
- 75. When all operations are done, job status becomes QC Pending.
- 76. After QC pass, status becomes Completed, then Dispatched when sent to site.

7.4 Machines

- 77. Navigate to Manufacturing, then Machines.
- 78. Six machines are pre-loaded: Panel Saw, CNC Router, Edge Bander, Multi Borer, Press, Spray Booth.
- 79. Change machine status: Running, Idle, or Breakdown.
- 80. Log a maintenance event: click the machine, enter description and date of service.
- 81. Machines in Breakdown are flagged on the Factory Dashboard and cannot be assigned to operations.

8. Site and Installation Module

The Site module manages everything from the moment a product leaves the factory until it is handed over to the client on site.

8.1 Site Dashboard

The Site Dashboard is the default landing page for the Site Supervisor. It shows:

- Incoming Deliveries - products dispatched from factory, awaiting site receipt
- Active Installations - products currently being installed
- Completed Handovers - products signed off by client
- Per-project activity summary - all products and their current site status

8.2 Deliveries

82. When the Factory Supervisor marks a product as Dispatched, a Delivery record is auto-created in Site, then Deliveries.
83. The Site Supervisor receives the delivery on site and clicks Confirm Receipt.
84. Confirming receipt auto-creates an Installation Job for that product.
85. If items are damaged or missing, note it in the Remarks field before confirming.

8.3 Installation

86. Navigate to Site, then Installation.
87. Each confirmed delivery creates one Installation Job per product.
88. Assign the installation team (workers) and set the start date.
89. Click Advance to move through stages:

Waiting	Job created; team not yet on site.
In Progress	Team on site, installation underway.
Site QC	Installation complete; QC checklist auto-created for supervisor sign-off.
Completed	QC passed; handover date stamped; product marked Installed.

8.4 Site QC and Handover

90. When a job reaches Site QC, a QC checklist opens automatically.
91. The Site Supervisor ticks off each item (finish quality, alignment, hardware, cleanliness).

92. On passing QC, click Advance to mark as Completed.
93. The product status updates to Installed and the handover date is stamped.
94. Once all products in a project are Installed, the project is flagged Ready to Invoice on the CEO Dashboard.

9. Warehouse and Inventory

9.1 Stock Management

- 95. Navigate to Warehouse, then Stock.
- 96. The stock list shows all items, current quantity, unit, minimum level, and standard cost.
- 97. To receive stock: click Add Stock, select item, enter quantity and unit cost. Stock level updates immediately.
- 98. Items below minimum level appear as alerts on the CEO Dashboard and Factory Dashboard.

9.2 Material Issues

- 99. Navigate to Warehouse, then Material Issues.
- 100. Click Issue Material. Select the project and product, then add items and quantities.
- 101. Save. Stock is auto-deducted. The issue is linked to the project for cost tracking.

9.3 Material Returns

- 102. Navigate to Warehouse, then Returns.
- 103. Click New Return. Select the original issue, enter items and quantities being returned.
- 104. Save. Stock levels are automatically incremented.

9.4 Stock Ledger

Navigate to Reports, then Stock Ledger to see a full transaction history per item - every receipt, issue, and return with dates, project links, and running balance.

10. Purchases

10.1 Vendor Bills

105. Navigate to Purchases, then Bills.
106. Click New Bill.
107. Select vendor (from Vendor Master), enter bill date, due date, and reference number.
108. Add line items: description, quantity, unit, rate. Total auto-calculates.
109. Link to a project for accurate job costing.
110. Save as Draft, then submit when ready.
111. When payment is made, click Mark as Paid and enter the payment date and bank account.

Unpaid bills past their due date appear as alerts on the CEO Dashboard.

11. Sales Invoices and Receipts

11.1 Creating a Sales Invoice

- 112. Navigate to Sales, then Invoices.
- 113. Click New Invoice.
- 114. Select customer and project. The invoice is auto-numbered (e.g. INV-2026-001).
- 115. Add line items (or import from BOQ): description, quantity, unit, rate.
- 116. Apply tax if applicable. Grand total calculates automatically.
- 117. Set due date and payment terms.
- 118. Click Print / PDF for a formatted invoice to send to the client.
- 119. Change status to Sent once emailed.

11.2 Recording a Receipt

- 120. Navigate to Sales, then Receipts.
- 121. Click New Receipt.
- 122. Select the invoice being paid. Enter amount received, date, and payment mode (bank transfer / cheque / cash).
- 123. Save. The invoice status updates to Partially Paid or Paid depending on the amount.
- 124. Outstanding receivables on the CEO Dashboard update automatically.

12. Financial Management

12.1 Chart of Accounts

Navigate to Accounts, then Chart of Accounts. All income, expense, asset, and liability accounts are listed here. Transactions from sales, purchases, wages, and petty cash auto-post to the relevant accounts. The CEO can add or reclassify accounts as needed.

12.2 Banking

- 125. Navigate to Accounts, then Banking.
- 126. View all bank accounts and their current balances.
- 127. Record transactions: deposits, withdrawals, inter-account transfers.
- 128. Reconcile by matching ERP transactions against bank statements.

12.3 Petty Cash

- 129. Navigate to Accounts, then Petty Cash.
- 130. Click Add Entry. Enter description, amount, date, and category.
- 131. Running balance shown at the top. Top up petty cash by recording a cash withdrawal from banking.

12.4 Labour and Wages

- 132. Navigate to Accounts, then Labour and Wages.
- 133. Worker rates are defined in Master Data, then Workers.
- 134. Log time per worker per project/product.
- 135. Total wages are calculated and flow into Job Analysis as a cost.
- 136. Generate a wage summary by week or by project for payroll.

13. Reports

Job Analysis	Per-project profitability: Revenue minus all costs (materials, labour, expenses, overheads). Shows profit/loss per project.
P&L Report	Company-wide income statement for any date range. Revenue, cost of goods, gross profit, operating expenses, net profit.
Product Costing	Cost breakdown per furniture item: material cost, labour cost, overhead allocation. Used to validate pricing.
Stock Ledger	Full transaction history per stock item with running balance. Use to audit usage and identify waste.

All reports can be filtered by date range and printed or exported to PDF. Access via the Reports menu (CEO and Accounts roles only).

14. Master Data

Master Data is managed by the CEO and defines the reference records used across all modules.

14.1 Workers

- Navigate to Master Data, then Workers.
- Add each worker: Full Name, Role (carpenter / welder / painter / etc.), Department (factory / site), Contact Number.
- Set Daily Rate and Hourly Rate - used for automatic wage calculations.
- Mark workers as Active or Inactive. Inactive workers do not appear in assignment dropdowns.

14.2 Item Master

- Navigate to Master Data, then Items.
- Add each stock item: Item Name, Category, Unit of Measure (pcs / sqft / rft / kg / ltr), Minimum Stock Level, Standard Cost.
- Items defined here appear in stock receipts, material issues, and purchase bills.
- Minimum stock level triggers alerts when stock falls below this threshold.

14.3 Vendor Master

- Navigate to Master Data, then Vendors.
- Add each supplier: Vendor Name, Contact Person, Phone, Email, Address, Payment Terms (e.g. Net 30).
- Categorise vendors (timber / hardware / paint / upholstery / outsource).
- Vendor records link to all purchase bills for spend tracking and payment history.

15. Estimation & Costing Engine

The Costing Engine calculates a furniture item's material, hardware, and labour cost - and its selling price - directly from its dimensions and a chosen construction Template, instead of every estimator entering material and labour lines by hand. It is used from both the Estimation Request Costing screen and the Quotations BOQ Builder.

15.1 Estimator Dashboard

The default landing page for the Estimator role.

- Incoming Estimation Requests - raised automatically from a Lead marked Quotation Requested. Click Claim to take ownership.
- My Assigned Requests - requests you have claimed and are currently costing.

15.2 Costing Masters

The reference data the Costing Engine calculates from. Managed by CEO, Admin, or Estimator.

- Costing Engine Defaults - Sheet Size, Default Wastage %, Default Overhead %, Default Profit % used whenever a line item does not set its own.
- Templates - construction rules for a furniture type (Case Goods, Flat Panel, or Flat Top), with flags for doors, sliding shutter, drawers, shelves, back panel, table top, CNC requirement, lift-up fitting, and a default wastage %.
- Materials - core, laminate, veneer, edge band, glass, and mirror rate cards, each with a unit (Sheet / Sqft / Rmt), purchase rate, and optional per-material wastage %.
- Hardware - hinges, drawer slides, handles, shelf pins, soft-close and lift-up systems, sliding track, and LED profiles, each with a purchase rate.
- Labour Rates - a named rate card (Cutting, Edge Banding, Assembly, Lamination, Veneering, Melamine Polish, CNC Charges, Glass Installation, Installation, Loading, Unloading, Transportation) used by every costing calculation.

15.3 Costing an Estimation Request

137. From My Assigned Requests, open a request to reach Costing Preparation.
138. Use the Raw Materials, Labour and Wages, and Other Expenses tabs for manual line-by-line entry, exactly as before.
139. Use the new Parametric Items tab to add a costed item instead: click + Add Costed Item, choose a Template and Core Material, enter dimensions, quantity, and overhead/profit %, and review the live cost and suggested selling price before adding.
140. All four tabs (Materials, Labour, Expenses, Parametric Items) roll up into one Estimated Cost total shown at the top of the screen.
141. Click Save Costing (Draft) when done. The costing can be re-opened and edited until the estimation request is converted to a quotation.

15.4 Costing Dashboard

A single view of estimation and sales performance, built entirely from live data - nothing here needs separate manual entry.

- Open Estimation Requests, Quotations Won, Quotations Lost, and Win Rate as headline figures.
- Costed Line Items table - every costed item added anywhere in the system, with its cost, selling price, and margin %, so the CEO can see whether real quotations are pricing at a healthy margin.
- Quotation Pipeline by Status - count and total value in each status column.
- Business by Referral Partner - Won value attributed to each Architect, Builder, or B2B Partner (see Section 5.6).

16. End-to-End Workflow

The ERP automates handoffs between departments. The full chain from lead to payment is:

1. Lead Captured	Sales team adds lead in CRM. Status: New.
2. Quotation Created	Sales builds quotation with BOQ Builder. Status: Draft then Sent.
3. Quotation Approved	Client signs off. Status: Approved. Lead marked Won.
4. Project Created	CEO or Sales creates project from approved quotation.
5. Products Added	Each furniture item added to the project.
6. Manufacturing Jobs Auto-Created	One job per product appears in Manufacturing - Jobs automatically.
7. Operations Assigned	Factory Supervisor assigns operator and machine to each operation.
8. Production	Factory team completes operations, each marked Done sequentially.
9. Final QC (Factory)	All operations done: Job status QC Pending, then QC Pass, then Completed.
10. Dispatch	Factory Supervisor marks job Dispatched. Site Delivery record auto-created.
11. Site Receipt	Site Supervisor confirms delivery. Installation Job auto-created.
12. Installation	Site team installs product. Advance through stages.
13. Site QC	QC checklist completed on site. Job marked Completed.
14. Handover	All products installed. Project flagged Ready to Invoice on CEO Dashboard.
15. Invoice Raised	Accounts team creates Sales Invoice. Sent to client.
16. Payment Received	Receipt recorded. Invoice marked Paid. Receivables updated.

At every stage, the CEO Dashboard reflects the current state across all active projects in real time.

17. Quick Reference - Common Tasks

Add a new lead	CRM > Leads > Add Lead	Sales / CEO
Create a quotation with BOQ	CRM > Quotations > New > Open BOQ	Sales / CEO
Start a new project	Projects > New Project	CEO
Add a product to a project	Projects > [Project] > Add Product	CEO
Assign factory operation	Manufacturing > Jobs > [Job] > [Operation]	Factory Supervisor
Change machine status	Manufacturing > Machines > [Machine]	Factory Supervisor
Confirm site delivery	Site > Deliveries > Confirm Receipt	Site Supervisor
Advance installation stage	Site > Installation > [Job] > Advance	Site Supervisor
Issue materials to project	Warehouse > Material Issues > Issue Material	Factory Supervisor
Receive new stock	Warehouse > Stock > Add Stock	Factory Supervisor / Accounts
Raise a vendor bill	Purchases > Bills > New Bill	Accounts
Create a sales invoice	Sales > Invoices > New Invoice	Accounts
Record a client payment	Sales > Receipts > New Receipt	Accounts
Check project profitability	Reports > Job Analysis	CEO / Accounts
View company P and L	Reports > P and L Report	CEO / Accounts
Add a worker	Master Data > Workers > Add Worker	CEO
Add a stock item	Master Data > Items > Add Item	CEO

Add a vendor	Master Data > Vendors > Add Vendor	CEO / Accounts
--------------	------------------------------------	----------------

18. Document Control

Document Title	Appletree Interiors ERP - Standard Operating Procedure
Version	2.0
Change Summary	Added: editable Role Access Matrix (2.1), costed quotation items, revisions, discount/GST, follow-up log, Won/Lost tracking (5.2-5.3), Quotations Kanban (5.5), Partners & Referrals (5.6), and the full Estimation & Costing Engine module (Section 15).
Date Issued	July 2026
Prepared By	Appletree Interiors - Management
Review Frequency	Quarterly, or when a major module is added
Distribution	All staff with ERP access - internal only
Classification	Confidential
