

APPLETREE ERP — MONTH-END CLOSING CHECKLIST

(UAT / Demo version. This is a RECOMMENDED procedure built from what the ERP actually supports today — Management/Finance confirmation is required before treating this as Apple Tree's official month-end process.)

Before you start

- ☐ Confirm the Financial Period for the month exists (FINANCE → Financial Periods). If not, create it.
- ☐ Tell all departments the period is closing soon, so pending drafts get submitted in time.

Step 1 — Clear the backlog (*Recommended — confirmation required*)

- ☐ No Draft documents left sitting unsubmitted from the month (Journal Vouchers, Purchase Requisitions, Purchase Orders, Site MRS).
- ☐ No Submitted documents left waiting on an approver — chase them down.
- ☐ All GRNs for the month recorded — nothing physically received but not yet entered.

Step 2 — Review Journal Entries (*Recommended — confirmation required*)

- ☐ Review the Journal Register for the month — anything unusual or manually entered that needs a second look.
- ☐ Confirm no journal entry is still sitting in Draft/Submitted/Approved without being Posted.

Step 3 — AR Review

- ☐ Run AR Ageing. Follow up on anything significantly overdue.
- ☐ Confirm every Customer Receipt this month has been Cleared against the right invoice.

Step 4 — AP Review

- ☐ Run AP Ageing. Confirm nothing critical is overdue to a supplier.
- ☐ Confirm every Supplier Payment this month has been Cleared against the right bill.
- ☐ Confirm no bill is sitting with an unresolved three-way-match exception.

Step 5 — Inventory Reconciliation

- ☐ Run the Reconciliation screen — confirm computed Inventory value matches the GL Inventory account balance.
- ☐ Review the Site Material Reconciliation for every active site — investigate any variance beyond tolerance.
- ☐ Review open Job Work Orders — confirm nothing has quietly gone overdue on its return period without an approved extension.

Step 6 — Bank Reconciliation

- ☐ Import/match the real bank statement for every bank account.
- ☐ Confirm no unmatched lines remain unexplained.

Step 7 — Fixed Assets

- ☐ Confirm depreciation has been posted for the month on every capitalized asset.
- ☐ Run the Fixed Asset Reconciliation — sum of individual assets matches the GL control account.

Step 8 — Tax Review

- ☐ Review TDS deductions for the month (FINANCE SOP → Compliance Reports) — confirm every threshold-crossing payment was correctly categorized.
- ☐ Review the ITC Reversal report for the month.
- ☐ Review the Seller Cumulative / 194Q report for any supplier newly crossing the Rs.50 lakh threshold.

Step 9 — Project Cost Review

- ☐ Spot-check a sample of active projects' Actual Cost vs. budget on Project 360.
- ☐ Review the BOQ/BOM Variance report for any project flagged with abnormal consumption.

Step 10 — Exception Review

- ☐ Review the Cash Control Exceptions report for the month — confirm every override had a genuine, documented reason.
- ☐ Review the SOP Compliance Dashboard — nothing newly added to Configuration Required / Management Decisions that hasn't been flagged upward.

Step 11 — Close the Period

- [] Once everything above is clean, close the Financial Period (FINANCE → Financial Periods). This blocks further posting into that period unless an authorized override role is configured.

Step 12 — Reports Pack

- [] Generate/export: Trial Balance, Balance Sheet, Company P&L, AR Ageing, AP Ageing, Reconciliation summary.

Reminder: every step marked in this checklist reflects what the ERP is technically capable of supporting today — it is not yet an approved, mandatory Apple Tree company procedure until Finance/Management formally confirms it.
